

Fleet Live View ROI Calculator Checklist

backwatch.co.uk

Use this checklist to estimate the operating cost savings from live view across five cost lines — insurance, claims, fuel, maintenance, and administration time.

1. Insurance Premium Savings

- ☐ Record current annual fleet insurance premium (£)
- ☐ Note number of vehicles and any telematics/camera endorsements
- ☐ Estimate 5–10% reduction as documented baseline for connected fleets
- ☐ Confirm with broker whether camera system qualifies for risk reduction
- ☐ Note renewal date to ensure system is active and documented in time

2. Claim Settlement Savings

- ☐ List all claim settlements in past 24 months (£ totals)
- ☐ Identify any claims where footage was unavailable
- ☐ Estimate what a defeated or reduced claim would have saved
- ☐ Note any fraudulent or inflated claims that went uncontested
- ☐ Calculate average settlement cost per incident for baseline

3. Fuel Cost Savings

- ☐ Record current annual fuel spend (£)
- ☐ Run driver behaviour report: harsh braking, acceleration, idling events
- ☐ Estimate 3–5% fuel reduction as conservative first-year target
- ☐ Identify highest-consumption vehicles/drivers for coaching
- ☐ Set 90-day review date to measure behaviour improvement

4. Vehicle Downtime Reduction

- ☐ Note incidents in past 12 months requiring depot footage retrieval
- ☐ Estimate hours per incident spent on manual footage pulls
- ☐ Cost those hours at transport manager rate (£/hr)
- ☐ Note any vehicles held off-road during investigation

- ☐ Estimate revenue/productivity cost of those off-road days

5. Administration Time Savings

- ☐ Log current hours per incident: footage retrieval, report prep, insurer liaison
- ☐ Cost at relevant management rate (£/hr)
- ☐ Multiply by incident frequency over 12 months
- ☐ Add control room time spent waiting on driver updates vs live visibility
- ☐ Total admin cost saving = Hours × Rate × Annual incident frequency
